DETAILED ACTION

Response to Amendment

1. Claims 1-47 have been cancelled. Claims 48-79 have been added. Claims 48-79 are pending.

Priority

2. Applicant's claim for the benefit of a prior-filed application under 35 U.S.C. 119(e) or under 35 U.S.C. 120, 121, or 365(c) is acknowledged. Applicant has not complied with one or more conditions for receiving the benefit of an earlier filing date under 35 U.S.C. 120 as follows:

This application is claiming the benefit of prior-filed nonprovisional application No. 10/128,105 under 35 U.S.C. 120, 121, or 365(c). Copendency between the current application and the prior application is required. Since the applications are not copending, the benefit claim to the prior-filed nonprovisional application is improper. Applicant is required to delete the reference to the prior-filed application from the first sentence(s) of the specification, or the application data sheet, depending on where the reference was originally submitted, unless applicant can establish copendency between the applications.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 48-79 are rejected under 35 U.S.C. 102(e) as being anticipated by Murdock et al, US 6,581,595 B1 ("Murdock").

Claims 48-79: Murdock teaches an indirect calorimeter and method for respiratory gas analysis (see Abstract), comprising: a low tube 24; a ultrasonic flow meter 60 (or "other types of flow sensors can also be used", such as a fluorescence quench oxygen sensor, see col. 5, ll. 22-24) for determining a volume of respiratory gases; an oxygen sensor 56 for determining a concentration of oxygen in the respiratory gases; a computation unit 46 for determining an amount of oxygen consumed and the amount of carbon dioxide produced (see col. 6, ll. 26-56); a respiratory connector or mask 30; a display 72.
